

GBFILL N

جي بي فيل إن

Polymer modified, special mortar for filling joints between ceramic tiles, porcelain and natural stones, water and weather resistant

Added Value

GB Fill N is a product specially designed for use in the cases of tiles, ceramics and modern porcelain with a very low water absorption rate, which cause the cracking and separation of the normal joint filler material and also provide isolation of water leakage between and under the tiles, which causes the dislocation and removal of tiles.

Application and Rates

GB Fill N is easily mixed with water, producing an easy-to-apply, creamy material applied by the normal trowel, and then remove excess material by wet sponge.

Delivered in 20 kg double-layer packages against moisture.

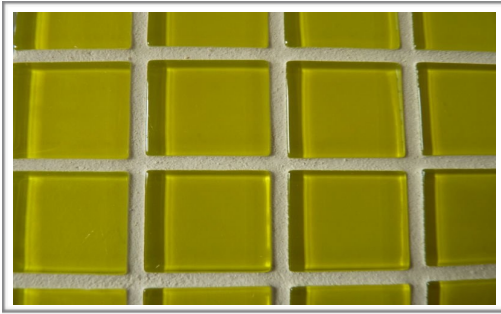

Product Specifications

- Gray or white very soft powder (special colors could be produced on request).
- The application rate of 3-7 meters/ 1 kilo material at thickness interval up to 5 mm.
- Material stress 200 kg / cm²
- Mixing water 4-5 liters per package 20 kg.
- Product validity for one year from the date of production provided the packaging is safe.

GBFill N Features.

- * With the great development of ceramics, porcelain and special tiles, the need for high-quality and impermeable filler for tile joints has become very urgent.
- * It is specially designed for the purpose of being a strong material treated with polymers and special materials to produce when mixed with water an easy to apply, creamy mortar for the joint filling applications, and can be applied to all types of ceramic tiles, porcelain and natural stones as well. After application of the material on the joints between the tiles up to 5 mm thickness and the complete drying of the mortar, **GB Fill N** provides a final solution to prevent water leaks under the tiles which causes the dislocation and removal of tiles from the substrate.
- * GBFill is supplied in 2 grades; **GBFill N** for joints up to 4 mm, and **GBFill W** for joints from 4 mm up to 10 mm, or slightly more.

Application fields

GB Fill N is used in the following areas and applications:

- Swimming pools
- Kitchens: Household and commercial, such as restaurants and hotels, Super, and hypermarkets and malls.
- Home baths and showers.
- To prolong the life of ceramic and porcelain tiles and protect it from leakage of water under the tiles and their separation from the substrate.
- Does not contain any harmful substances to the environment and contain more than 60% of the composition on natural materials safe recycling.

Components

- Each pack of **GB Fill N** contains the latest adhesive technology in a special blend that makes the material easy for application to be homogeneous and strong glued to the sides of the tiles, especially tiles with a very weak adsorption rate such as porcelain tiles.
- Each package also contains special materials to prevent cracks that appear in the case of the use of ordinary cement in the filling of joints of tiles, ceramics and porcelain.
